

Arjun Kumar

arjun.kumar.ml@example.com | +91 90000 12343 | Hyderabad, India

PROFESSIONAL SUMMARY

Python and Machine Learning Developer focused on data-driven applications and model experimentation. Experienced with Python, Django, PostgreSQL, machine learning and deep learning workflows. Has worked with SQL and Git, but has limited professional exposure to Java and Java-based backend frameworks.

TECHNICAL SKILLS

Python, Django, PostgreSQL, Machine Learning, Deep Learning, Git, SQL

EDUCATION

B.Tech in Artificial Intelligence and Data Science

South Valley Institute of Technology, Bengaluru | 2022 | CGPA: 8.4/10

INTERNSHIP / EXPERIENCE

Machine Learning Intern, DataSpring Analytics | Jan 2022 – Jun 2022

Worked on Python-based data preparation and predictive modeling tasks.

- Prepared datasets using Python and SQL for model training.
- Experimented with classification and regression models.
- Tracked source code and experiment utilities using Git.

Python Developer, InsightForge Labs | Jul 2022 – Present

Develops Django services that support internal machine learning applications.

- Built Django endpoints for submitting data and retrieving model predictions.
- Used PostgreSQL for application and experiment metadata.
- Developed deep learning prototypes for image and text classification.
- Has only limited exposure to Java and no substantial Spring Boot production experience.

PROJECTS

Customer Churn Predictor

Created a Python machine learning application that predicts customer churn from historical records and exposes prediction results through a Django service.

Image Classification Pipeline

Built a deep learning prototype using Python for image classification, with PostgreSQL used to store experiment metadata and Git used for version control.

CERTIFICATIONS

- Python for Data Science — Fictional Skills Certification
- Machine Learning Foundations — Fictional Skills Certification
- Deep Learning with Neural Networks — Fictional Skills Certification
