

Karan Mehta

karan.mehta.dev@example.com | +91 90000 12345 | Hyderabad, India

PROFESSIONAL SUMMARY

Java backend engineer with around 3 years of experience creating server-side applications and REST services. Worked mainly with Java, Springboot, MySQL, Git and Docker. Comfortable with data structure and algorithm concepts, SQL and Linux while developing maintainable backend components. Familiar with scalable service design and database-backed APIs.

TECHNICAL SKILLS

Java, Springboot, MySQL, REST services, Git, Docker, Data structure, Algorithms, SQL, Linux

EDUCATION

B.Tech in Computer Science and Engineering

Horizon College of Technology, Hyderabad | 2021 | CGPA: 8.5/10

INTERNSHIP / EXPERIENCE

Backend Engineering Intern, VertexByte Solutions | Jan 2021 – Jun 2021

Worked with the backend team on Java services for an internal sales application.

- Developed REST services using Java and Springboot.
- Used MySQL for application records and wrote SQL queries for reports.
- Used Git for source management and Linux for local troubleshooting.

Java Backend Engineer, NovaStack Systems | Jul 2021 – Present

Develops Java server-side components for business workflow applications.

- Created Springboot REST services for customer and order workflows.
- Used Docker to package backend applications for consistent development environments.
- Improved SQL access and database queries for frequently used endpoints.
- Applied data structure and algorithm techniques to improve processing of backend requests.

PROJECTS

Sales Order Service

Built a Java Springboot backend for sales orders with REST services, MySQL persistence and request validation. Maintained the project in Git and used Docker for application packaging.

Stock Tracking Backend

Implemented a backend service for inventory updates and stock queries using Java, Springboot and MySQL, with simple components designed for future scaling.

CERTIFICATIONS

- Java Foundations — Fictional Skills Certification
- Springboot REST Development — Fictional Skills Certification
- Docker for Developers — Fictional Skills Certification
